DETAILED ACTION

1. The abstract is objected to as being longer than 150 words. It is recommended that it be amended to read as shown below.

Abstract of the disclosure

A hybrid heat transfer loop system includes a primary passive two-phase flow segment with an evaporator, a condenser, and a liquid reservoir, and a secondary actively pumped liquid flow segment in which the liquid in the reservoir is drawn by a pump into the evaporator, where a portion of the liquid is vaporized by the heat input and moves into the primary segment while the excess liquid is pumped back to the reservoir. The evaporator includes a porous wick and one or more liquid arteries encased in the porous wick. The liquid arteries have porous walls to allow liquid phase working fluid to flow into the surrounding porous wick. The excess liquid continues to move through the arteries and eventually out of the evaporator and into the reservoir. The porous wick provides sufficient capillary force to separate the liquid inside the arteries and the vapor in the evaporator.

- 2. Claims 1-41 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: The prior art does not disclose or render obvious a hybrid loop as claimed including one or more liquid arteries encased in a porous wick, a liquid phase working fluid in excess of the

Application/Control Number: 10/706,017

Art Unit: 3742

evaporation requirements being drawn by a pump into the liquid arteries, and the excess liquid phase working fluid in the arteries being driven by the pump into a reservoir.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shuback and Holtzapple et al are cited to show porous wicks with arteries.

Fujisaki et al, Zhou et al, Kroliczek et al, and Hoang are cited to show loop heat transfer systems.

5. This application is in condition for allowance except for the following formal matters:

The abstract must be amended to contain not more than 150 words.

Prosecution on the merits is closed in accordance with the practice under *Ex* parte Quayle, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO**MONTHS from the mailing date of this letter.

Art Unit: 3742

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa J. Walberg whose telephone number is 571-272-4790. The examiner can normally be reached on M-F 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
